A typical 100-watt solar panel is 41.8 inches long and 20.9 inches wide. It takes up 6.07 sq ft of area. If you have a 1000 sq ft roof, and you can use 75% of that roof area for solar panels, you can theoretically put 123 100-watt solar panels on a 1000 sq ft roof. A typical 300-watt solar panel is 65.8 inches long and 36.1 inches wide.

Crystalline photovoltaic panels are made by gluing several solar cells (typically 1.5 W each) onto a plate, as can be seen in Figure 1, and connecting them in series and parallel until voltages of 12 V, 24 V or higher are obtained. They are capable of delivering powers of even several hundred watts.
