These panels are black and have a good level of homogeneity. Monocrystalline panels are slightly more expensive than polycrystalline panels, however, the price difference between the two is narrowing in India. Monocrystalline panels with higher efficiency can produce more electricity per square foot.

96 monocrystalline cells; 600V system voltage; MC4 connectors; More power, fewer modules. Panasonic panels show 19.7% energy conversion rate which is among the highest numbers for panels of this power output. Since modules can harvest more energy from the sun, it means it takes fewer Panasonic modules to power your home.

The Growcol 330W mono solar panel is a photovoltaic module that converts sunlight into electricity. It has a power output of 330 watts, making it capable of generating a significant amount of electricity. The "mono" refers to monocrystalline solar cells used in the panel, which are highly efficient and offer a sleek black appearance.
