density. Energy density refers to the amount of energy that can be stored in a given volume or weight of battery. Lithium-ion batteries have a high energy density, making them coveted for use in portable electronics, laptops, and smartphones.

3) Relatively Low Energy Density LiFePO₄ batteries have a lower energy density compared to ternary batteries. A single LiFePO₄ cell typically has an energy density that does not exceed 200Wh/kg, and battery packs generally range from 120-140Wh/kg. In contrast, ternary batteries can achieve energy densities of up to 350Wh/kg for single cells and ...

People can customize the prismatic cell according to the size of the product, so there are thousands of models on the market. The processes are difficult to standardize, the level of production automation is not high, the variability of the single unit is significant, and in large-scale applications, there is a problem that the system life is much lower than the life of the single cell.
