2.1 Electric double layer capacitor. Supercapacitors are broadly categorized into two classes based on their charge storing mechanism, namely: (i) electrical double layer capacitor (EDLC), and (ii) pseudocapacitor (PC). The EDLC stores the charges in the form of an electric double layer (EDL) that has a charge separation distance of <1 nm.

Electric double-layer capacitors, also known as supercapacitors,electrochemical double layer capacitors (EDLCs), or ultracapacitors, are electrochemical capacitors that have an unusually high energy density when compared to common capacitors, typically on the order of thousands of timesgreater than a high capacity electrolytic capacitor.
