

Can an off-grid photovoltaic energy system feed a proton-exchange membrane water electrolyzer?

This study analyses an off-grid photovoltaic energy system designed to feed a proton-exchange membrane water electrolyzer for hydrogen production to evaluate the optimal electrolyzer size. The system has been analyzed in Baghdad, the capital of Iraq, using experimental meteorological data.

Where is a 12 kWp photovoltaic array located?

The system has been analyzed in Baghdad, the capital of Iraq, using experimental meteorological data. The 12 kWp photovoltaic array is positioned at the optimal annual tilt angle for the selected site. The temperature effect on photovoltaic modules is taken into consideration.

What is the energy management technique for a photovoltaic system?

Hassani et al. [30] presented an energy management technique for a photovoltaic system with battery storage and an electrolyzer for hydrogen production, where each subsystem was developed to determine the most appropriate quantity of hydrogen-supplying components. An energy management system was implemented to control these various sources.

What are the components of a photovoltaic system?

The system consists of five primary parts. The first component is the PV array responsible for power generation; the next is AC/DC converter, an electrolyzer, a compressor, and a hydrogen tank. The photovoltaic array with the converter is responsible for controlling the amount of DC power that is transported to the electrolyzer.

How many modules are in a photovoltaic array?

The photovoltaic array consisted of 12 modules with a total power of 12 kW p (module specifications presented in Table 1). The array was installed and placed at the optimal annual orientation for the chosen location. (tilt angle = 30°; and azimuth angle = 0°; south facing).

How much energy does a photovoltaic system produce?

It has been found that the annual energy generated by the analyzed photovoltaic system is 18,892 kWh at 4313 operating hours, and the obtained hydrogen production cost ranges from USD 5.39/kg to USD 3.23/kg. The optimal electrolyzer capacity matches a 12 kW p PV system equal to 8 kW, producing 37.5 kg/year/kW p of hydrogen for USD 3.23/kg. 1.

power to the grid when it turns off the grid, due to missing a synchronizing system. So, the stand-alone (off-grid) system could be a good choice to solve the previous problems [18]. The design of the solar PV power system is essential for achieving the most

The total energy generated from the off-grid photovoltaic power system meets the desired electrical load of

households and recharges the batteries, whereas the excess electricity from the on-grid photovoltaic power system feeds the grid. The two designed systems are environmentally friendly and economically viable.

The solar power potential of an area is calculated at 2274 kWh/m² in Baghdad. The technical solar power potential of an electric generation system with photovoltaic panels placed within a ...

Ekren [1] showed an optimum sizing procedure of PV/wind hybrid system in Turkey. Ahmed [3] presented a hybrid system consists of wind turbine, solar photovoltaic and fuel cell generation. The wind and photovoltaic systems were used as its main energy sources while the fuel cell is used as a secondary or back-up energy source.

In this study, a rooftop stand-alone solar electric system is designed to provide all the electrical power to a house in Baghdad-Iraq, using a (How to design PV system) simulation...

The use of stand-alone photovoltaic (PV) systems is restricted mainly due to their high initial costs. This problem is alleviated by optimal sizing as it results in reliable and cost-effective systems. Using PV systems in Iraq can help resolve ...

Particle Swarm Optimization (PSO) scheme is applied to identify the sizing of wind turbines (WT), photovoltaic (PV) module, battery energy storage system (BESS) and diesel generator, and find the optimal configuration of HMGS system. The design and optimal operation of HMGS system has been developed and validated through MATLAB software.

Engineering and Technology Journal Vol. 38, Part A, (2020), No. 07, Pages 984-991 987 Figure3. On 23/6/2019, the above system tested from 11:30 am to 17:00 pm, the test time set in this

In this study, a rooftop stand-alone solar electric system is designed to provide all the electrical power to a house in Baghdad-Iraq, using a (How to design PV system) simulation ...

2.1 System Architecture. Figure 1 represents the architecture of HRES which is considered and simulated in HOMER software. This HRES comprises wind turbines, PV panels, batteries, etc. For backup, the storage system inverter is used [].The system is designed for an off-grid system for an institutional area.

My services and consultancies cover: Design, supply, install small and medium PV system both on-grid and off-grid. Energy management Auditing based on ISO 50001, water purification using solar energy. ... Born in Baghdad, Iraq, the Senior Chief electrical engineer at the Iraqi Ministry of Electricity, completed a B.Sc. in Electrical Engineering ...

In this paper, a stand- alone PVsystem was designed and simulated to supply a base transceiver station (BTS) in Iraq. A BTS in Jadriyah, Baghdad with 4.177 kW load power belong to Zain ...

The off-grid system includes PV and diesel generators while using batteries as a backup system. This study presented a new Improved Harmony Search, Simulated Annealing, and Geographic Information System (IHS-SA-GIS) hybrid algorithm for optimal sizing and location for the proposed hybrid system. The obtained results showed that using a PV ...

Pvsyst simulation outcomes appear the cost of energy generation for the on-grid PV system is less comparative to off-grid in Stockholm, Sweden, and India, New Delhi [12]. The sun-powered insolation local map of Iraq gives an idea about the average peak sun hours of Baghdad city.

Off-grid PV systems; Solarising diesel grids; Types of Systems. Grid connected. Grid-connected - residential; ... Baghdad; Basra; Training Centre Directory. 3 + PV Training Centres. 50 + PV Trainers. 10 + Energy Innovation Coaches. 900 + Registered contacts. ...

Figure 13. Off-grid mode: PV power is not sufficient to supply the essential load which will therefore be supplied by both PV panels and batteries. Figure 14. Off-grid mode: PV power is sufficient to supply the essential load and charge the batteries. 15 Microgrids and Local Energy Systems Figure 15. On-grid mode: PV power is not sufficient to ...

Using experimental meteorological data at 1-min precision, the system has been evaluated in Baghdad, the capital of Iraq. Positioned at the yearly optimum tilt angle for the selected site, the solar array is rated at 12 kWp. ... The results demonstrated that the hydrogen cost for the off-grid PV/EL system was determined to be \$6.22/kg with an ...

In this study, The System Advisor Model (SAM) simulation software has been used to analyze a Hybrid PV-Battery System in a residential cite in Iraq-Baghdad. The proposed ...

A typical solar PV system consists of solar panel, charge controller, batteries, inverter and the load. Figure 2 shows the block diagram of such a system. Figure (3). Block diagram of a typical solar PV system. Figure (3): Block diagram of a typical solar PV system 3.1. Charge controller: When battery is included in a system, the necessity of ...

generation and the demand that have been applied is the on-grid PV system, but it does not send power to the grid when it turns off the grid, due to missing a synchronizing system. So, the ...

The system has been analyzed in Baghdad, the capital of Iraq, using ... Techno-Economic Assessment of Green Hydrogen Production by an Off-Grid Photovoltaic Energy System ...

Single Phase Low Voltage Off-Grid Inverter / Multiple inverters can work together to form microgrid / 10 seconds of 200% overload capability. ... is applied in PV systems to achieve power line communication. Power Line Communication is ...

Baghdad photovoltaic off-grid system

The performance assessment of a 5 kWp On-Grid Mon-crystalline silicon photovoltaic(PV) solar system is the subject of the present paper. This PV system is located in Baghdad city, Al-Mansour company.

The study evaluates the visibility of solar photovoltaic power plant construction for electricity generation based on a 20 MW capacity. The assessment was performed for four main cities in Iraq by using hourly experimental weather data (solar irradiance, wind speed, and ambient temperature). The experimental data was measured for the period from 1st January to 31st ...

In this study, The System Advisor Model (SAM) simulation software has been used to analyze a Hybrid PV-Battery System in a residential cite in Iraq-Baghdad. The proposed system is 5kW which is affordable and applicable from the cost and required area points respectively. The monthly averaged electrical load is approximately calculated. The performance ratio for the ...

expands, they can quickly scale up and connect to the national grid [6,9]. Microgrid systems based on autonomous renewable energy sources (RES) are the most viable and cost-effective option for electrifying off-grid areas [10,11]. Therefore, from an economic and technical standpoint, such a system"s planning and optimal design are

This paper presents a programming of Off-Grid Photovoltaic System Design Software (PVSD) using Visual Basic to work with Iraq Condition; also this program will contain all the PV modules, Battery ...
