

# Bandar Seri Begawan Photovoltaic Power Storage Project

Should Brunei identify a large land for solar PV power stations?

Therefore, the Brunei government should identify such a large land for solar PV power stations and water electrolysis plants. It seems possible to identify and gazette such large sites within the developable areas, as shown in Figure 4.5.

Which VRE power station is installed in Brunei?

Currently, the only vRE power station is Tenaga Suria Brunei (TSB) Power Station with an installed capacity of 1.2 MW. The installed capacity portfolio in Brunei is shown in Figure 2.13. The ratio of vRE is approximately 0.1% only and gas-fired thermal power accounts for most of the total installed capacity.

What is the yearly PV generation capacity in Temburong District?

If 60 MW of PV is introduced in Temburong district, the yearly PV generation is 78 GWh, which exceeds the annual electricity consumption in Temburong district. On the other hand, when the interconnection is used to supply the surplus reserve, Brunei's connectable capacity is 335 MW, accounting for 28% of the total generation capacity.

How will PV generation impact nature in Temburong District?

If the PV generations were introduced to the connectable capacity under the current power demand condition, 300-600 acres of land use would be required in Temburong district, and 1,670-3,340 acres of land use would be required in Brunei Darussalam. This result could significantly impact nature in Temburong district.

What is the capacity of Brunei's PV development plan in 2035?

Brunei's connectable capacity is 335 MW, which accounts for 28% of the total generation capacity when the interconnection is not used in the current power demand and grid. Figure 2.14 shows Brunei will introduce about 300-75 MW of PV generation by 2035. Thus, this study result fully covers the capacity of Brunei's PV development plan in 2035.

Can VRE capacity be connected to Brunei's power grid and Temburong District?

This report defines this amount as connectable capacity. This effort is significant in promoting the introduction of 52 renewable energy. Therefore, ERIA analysed a vRE capacity that can be connected to Brunei's power grid and Temburong district. The next chapter describes the details of the analysis.

ERIA Research Project Report FY2020 no.19, Jakarta: ERIA, pp.119-51. 119 ... (PV) with electricity storage as power supply system based on the Temburong District Plan, 2006-2025. In the study, energy demand based on ... considering the new bridge connecting the capital city Bandar Seri Begawan (BSB) and Temburong. Table 4.1 shows the future ...
