

What are the opportunities for battery energy storage systems in Latin America?

The opportunities for battery energy storage systems (BESS) are growing rapidly in Latin America. Below are some key details for those who want to understand and succeed in the BESS market.

Why is energy storage important in Latin America and the Caribbean?

It will also be a key enabler of mass decarbonization and climate change mitigation, facilitating the expansion of variable renewable energy sources such as wind and solar while ensuring grid security. However, energy storage deployment in Latin America and the Caribbean (LAC) is still nascent.

Where are the lead-acid batteries in Latin America?

Though lithium-ion batteries are by far the dominant battery technology for energy storage in LAC, this study identified seven planned or operational lead-acid battery projects. Six of these are mini-grid projects paired with solar PV, located in Guyana, Chile, Costa Rica, and Colombia, as well as IDB projects in Bolivia and Suriname.

Does Colombia have a power purchase agreement for hybrid solar & Bess projects?

As of now, hybrid solar +BESS projects are progressing in Colombia due to the reliability charge (Cargo por Confiabilidad). However, large energy companies have reported that there are no Power Purchasing Agreements (PPAs) available specifically for stand-alone storage projects, making it harder to finance those projects.

How does Latin America's battery capacity compare to the US?

While the U.S. was expected to have nearly 60 GWh of installed battery capacity by the end of 2023, AMI estimates that Latin America had less than 1 GWh of operational BESS projects--a 60x difference. This large gap will be bridged at different speeds based on each country's specific regulations.

How much battery capacity will Latin America have by 2023?

By the end of 2023, Latin America is expected to have less than 1 GWh of operational BESS projects. In comparison, the U.S. was expected to have nearly 60 GWh of installed battery capacity, a 60x difference. This large gap will be bridged at different speeds based on each country's specific regulations.
