What are the different types of lithium batteries?

The three shapes of lithium batteries will eventually become cylindrical batteries, prismatic batteries and lithium polymer batteries through cylindrical winding, prismatic winding, and prismatic lamination. Different packaging structures mean different characteristics, so what are their differences? Part 1. What's the cylindrical lithium battery?

What is a lithium polymer battery?

Lithium polymer batteries are currently the least used battery form in electric vehicles. But in fact, we are not unfamiliar with it. Most of the batteries in mobile phones are lithium polymer batteries. The biggest difference between lithium polymer, cylindrical, and prismatic batteries is that their outer casing is made of aluminum-plastic film.

What is the difference between a square and a cylindrical battery?

Square batteries, also known as prismatic batteries, have a higher capacity than cylindrical batteries and are usually larger in size. The main difference between the two is their shape. Though square cells can be connected in both series and parallel, a disadvantage of series connection is that one bad cell can cause the entire battery pack to fail.

What are the different types of cylindrical batteries?

Cylindrical batteries are divided into lithium iron phosphate, cobalt oxide, manganate, cobalt oxide, and ternary systems. The shell is divided into two types: steel shell and polymer. Batteries with different material systems have different advantages. At present, cylindrical batteries are mainly steel-cased cylindrical lithium iron phosphate.

What are the different types of lithium battery packaging?

There are three main mainstream lithium battery packaging forms, namely cylindrical, prismatic, and lithium polymer. The three shapes of lithium batteries will eventually become cylindrical batteries, prismatic batteries and lithium polymer batteries through cylindrical winding, prismatic winding, and prismatic lamination.

Can lithium polymer batteries be developed based on customer needs?

Lithium battery manufacturers can also develop new battery cell models based on customer needs. However, the existing lithium polymer battery cell models are few and cannot meet market demand. At the same time, the cost of developing new models of lithium polymer batteries is relatively high.
