1. The new standard AS/NZS5139 introduces the terms "battery system" and "Battery Energy Storage System (BESS)". Traditionally the term "batteries" describe energy storage devices that produce dc power/energy. However, in recent years some of the energy storage devices available on the market include other integral

Enrique Valades Nieto, the plant's Deputy Project Director, adds that partnering with Siemens Energy means working with a technology provider that brings decades of experience with them. He can still recall the first CSP project he ever worked on back in 2008, which featured a Siemens Energy steam turbine generator set.

A solution solving both problems mentioned above, is using an energy storage device in the system. This storage can be used for peak shaving and storing regenerated energy. This paper suggests six different power management strategies: Only Generator, Peak Power Shaving, Dynamic Solution, Max On or Off, Average Power and Only Storage.
