The document summarizes a student project to design a 12V DC to 220V AC inverter capable of delivering over 60W of power. The proposed design uses a CD4047 IC in an astable multivibrator configuration with IRFZ44 MOSFETs in a push-pull arrangement to generate 50Hz AC from a 12V DC input. A step-up transformer then boosts the 12V AC output to 220V ...

Simply put, an inverter is an electrical device that converts voltage from direct current to alternating current. A converter is not the same as an inverter. A converter is an electrical device that converts the supply voltage from AC to DC. Simply put, an RV inverter converts DC to AC power and an RV converter converts AC to DC power.
