

Middle East Outdoor Power Agent

Will solar power power the Middle East?

The Middle East is a growing region for power generation and will require additional capacity to meet its economic ambitions and the needs of its people. There is no doubt that renewable sources of energy, especially solar, will play a major part in its future power mix.

Does the Middle East have a power supply?

Yet as the Middle East is flush with cheap natural resources, the region's power makeup is still almost exclusively dominated by oil and gas.⁴ The region currently uses oil and natural gas to meet 97 percent of its electricity needs. Economic growth hinges upon connectivity and power generation.

What is changing in the Middle East's power sector?

This thought-provoking report will broaden the understanding of any audience confronting the changing dynamics of the Middle East's power sector. The power market is transforming as energy independence and economic diversification play a bigger role.

How does the Middle East & North Africa strategy affect renewables?

Within the Middle East and North Africa (MENA) region, the increased industrial activity and drive towards renewables is reflected in each country's strategy. Continuous population growth and economic development have placed pressure on existing power assets and in some cases, created a significant gap between electricity production and demand.

Is the Middle East ready for a new era of electricity?

There is enormous potential for the Middle East's power sector, and plenty of room for a variety of new technologies and companies to help move into electricity's new era.

How many new power plants will the Middle East need?

The Middle East will need to construct 277 GW of new power plants in this time frame, while also considering a replacement for ageing infrastructure. In addition to new-build plants, there is a great deal of potential for brownfield plants.
