

# New outdoor power supply in Maputo

Where does Maputo's electricity come from?

In Maputo and the surrounding southern part of Mozambique, hydropower represents the lion's share of the installed capacity mix at 79%.

What is the optimal power system expansion plan for Mozambique?

The optimal power system expansion plan for Mozambique involves tripling its wind and solar capacity to reach almost 3 GW by 2032. This plan considers the current separation of the power system into two isolated transmission networks: the Central-Northern and Southern systems, with over 50% of the annual power demand in the Southern system.

Will Mozambique build a hydro power plant in 2024?

Since Mozambique has high hydro power potential, the country is focusing on developing large hydro projects that aim to be operational at the beginning of the 2030s.

What is the current power capacity of Mozambique?

Mozambique's power capacity is around 1,300 MW, which is utilised to meet local electricity demand. The country's biggest power plant, Cahora Bassa hydro plant, has an installed capacity of 2,075 MW, with over 75% of its electricity generated being exported to South Africa.

Which energy sources are used in Mozambique?

In Mozambique, liquid fuels and solar PV represent 4% and 1% of the existing installed capacity base. The country's biggest power plant, Cahora Bassa hydro plant, has an installed capacity of 2,075 MW.

Why is Mozambique focusing on hydropower?

Mozambique is focusing on hydropower due to its high hydro power potential. The country is developing large hydropower projects that aim to be operational at the beginning of the 2030s. Hydropower projects play an important role in decarbonizing the power sector in Mozambique.

Power supply from HCB will not be enough, is needed to improve existing power plants such as gas to secure other power sources in Southern region where demand is high. ...

D. Power Supply Deficiency: For the year leading up to 2008, the SAPP was in a state of power supply deficiency. This was attributed to delays in implementing generation projects against rising demand. Therefore, most power utilities implemented various load reduction programmes, including loadshedding.

We were once the largest contributor of gas-generated electricity, accounting for about 20% of supply at one point, but the sector is rapidly changing. New producers are entering the market, which will naturally dilute our market share. However, we remain confident we can continue to play a significant role.

## New outdoor power supply in Maputo

The 400-kilovolt transmission line, originating from the Temane Thermal Power Station in the Inhassoro district of Inhambane province and terminating in Maputo, serves as a backbone for enhancing the region's power ...
