In a grid-connected PV system, the modules, inverter, and grid constitute the electrical system. The inverter generates as much power as the solar module converts into solar energy, so the grid-connected inverter has no special requirements for AC overload because the inverter's output power does not exceed the module power.

The SolarEdge DC-AC PV inverter is specifically designed to work with the SolarEdge power optimizers. Because MPPT and voltage management are handled separately for each module by the power optimizer, the inverter is only responsible for DC to AC inversion.
