

Normal voltage range of photovoltaic panels to ground

What is a good grounding for a photovoltaic system?

Good grounding is essential, as the panels produce high DC voltages that can be sources of shock and fire, as well as induced voltages and electromagnetic interference on lines. With respect to grounding, there are two types of photovoltaic (PV) systems: floating and earthed or grounded.

Do PV systems need grounding?

It is a mandatory practice required by NEC and IEC codes to protect both equipment and personnel from damage and electric shock hazards. This article covers grounding in PV systems, which differs slightly from standard grounding systems.

Why is proper grounding of a photovoltaic power system important?

Proper grounding of a photovoltaic (PV) power system is critical to ensuring the safety of the public during the installation's decades-long life. Although all components of a PV system may not be fully functional for this period of time, the basic PV module can produce potentially dangerous currents and voltages for the life of the system.

What are the NFPA requirements for PV system grounding?

To ensure the safety of the public for these extended periods of time, PV systems must be properly designed and installed using the highest standards of workmanship. This paper addresses the requirements for PV system grounding contained in the U.S. National Electrical Code (NEC) published by the National Fire Protection Association (NFPA).

What is electrical & PV grounding?

Before discussing the subject of grounding, the term "grounding" requires definition. There are two types of grounding in electrical and PV systems--equipment grounding and system grounding. Equipment grounding is known in the ROW as safety grounding or protective earthing.

How many types of photovoltaic systems are there?

With respect to grounding, there are two types of photovoltaic (PV) systems: floating and earthed or grounded. In a floating system (Figure 1), non-current-carrying conductive parts are connected to ground in order to prevent dangerous or destructive voltages from developing.
