Typically, panels in the market range from 250 watts to 400 watts. To understand how six solar panels will perform collectively, one must engage in some algebraic calculations. If one considers six panels, each producing 300 watts on average, the total wattage can be computed as follows: $6 \text{ panels} \times 300 \text{ watts} = 1,800 \text{ watts}$.

How far apart should solar lights be placed? As a general rule, smaller profile lighting for residential use should be placed 6 - 8 feet apart while commercial applications that require more lighting should be placed 4 - 6 feet apart.
