How does Photovoltaic Glass work?

Photovoltaic glass harnesses free, clean energy from sunlight through embedded active layers or cells of photovoltaic material within the glass. The energy output of PV glass varies based on several design factors and installation types.

What is a 'U-value' in Photovoltaic Glass?

Onyx Solar's photovoltaic glass is a great material to provide control over internal building comfort levels. Expressed by the thermal transmittance of the glass, the 'U-value' represents the amount of heat that passes through the glass when there is a temperature difference between its two sides.
