

# Separate solar lights for home use

Can solar lights be used under a porch?

Some solar lights have small panels on each individual light, while others have a single external panel that powers the entire set. You might prefer the latter if you want to use the lights under a porch or covered patio; you'll be able to give the solar panel direct sunlight while keeping the lights where you want them.

How much sunlight does a solar panel need?

Generally, eight-10 hours of direct sunlight per day, will produce around 15 hours of illumination. But this will depend on location, type of light and exposure it gets. It's best to place your lights in an area that isn't shaded by trees, walls or even certain roofs, as these can obstruct the amount of light the solar panels receive.

How to choose solar lights?

Don't forget about what the solar lights will look like during the daytime as well. You don't want them to look too cluttered or obtrusive. Some come with stainless steel casing to give a more premium appeal, while others have glass lampshades. Some can also be concealed easily as well, but make sure they're not a tripping hazard.

Are solar lights a good option for outdoor space?

One great way to illuminate your outdoor space is with solar lights. Sarah Jameson, marketing director of Green Building Elements, says, "Solar lights, compared to low voltage and line voltage outdoor lights, are safer and more DIY-friendly since there's little to no wiring required at all."

Should I buy adjustable power solar lights?

If you're not 100 percent sure, then adjustable power solar lights might be best. Take into account how much sunlight that area gets too. If it's limited, you will need a separate solar panel which can be better placed. (Check out our 7 tips for improving the performance of your solar panels.)

How do you set up a solar light?

Setup involves nothing more than attaching the stake to the bottom on the light base and flipping the solar light panel down. We found operating the lights simple and straightforward, as there's only one on/off button. Plus, they turn on automatically when it's dark and off when it's light.
