What is an uninterruptible power supply?

An uninterruptible power supply is not all that different from a portable power station. At the end of the day, it's another battery storage device that you can plug into. But a UPS is usually designed to be more stationary. A common type of UPS, which basically looks like a bulky power strip, is often used to power computer systems.

Can a portable power station be used as an uninterruptible power supply?

Some portable power station models can also be used as an uninterruptible power supply. In this mode, you'd keep your electronics plugged all the time with the portable power station providing pass-through power, and the battery switches over in the event of a power outage, keeping your electronics running without a blip.
