

What is an energy storage capacitor test?

A simple energy storage capacitor test was set up to showcase the performance of ceramic, Tantalum, TaPoly, and supercapacitor banks. The capacitor banks were to be charged to 5V, and sizes to be kept modest. Capacitor banks were tested for charge retention, and discharge duration of a pulsed load to mimic a high power remote IoT system.

What are capacitors & capacitor banks used for?

The capacitors and capacitor banks are used in the energy sector (power factor correction), green energy generation (wind and photo voltaic power plants), traction systems and induction heating equipment.

Which capacitors are suitable for energy storage applications?

Tantalum and Tantalum Polymer capacitors are suitable for energy storage applications because they are very efficient in achieving high CV. For example, for case sizes ranging from EIA 1206 (3.2mm x 1.6mm) to an EIA 2924 (7.3mm x 6.1mm), it is quite easy to achieve capacitance ratings from 100uF to 2.2mF, respectively.

What are energy storage capacitor specifications?

Capacitor specifications of capacitance, DC leakage current (DCL), equivalent series resistance (ESR), size, etc. are typically room temperature measurements under a very specific test condition. Furthermore, energy storage capacitors will often be set up in some parallel/series combination that can pose unique challenges or unexpected behaviour.

What is a ZEZ Silko capacitor bank?

The capacitor banks are available for voltages up to 36kV and power ratings up to 10MVar. The ZEZ Silko capacitor bank type SCA is used for individual or central power factor correction in medium voltage power networks. The capacitor banks are constructed on steel frames according to customer specifications.

What makes a good capacitor bank?

Capacitor banks are built with each technology that are viable solutions. Design considerations are discussed for optimization of each capacitor bank and analyzed. Results of the analysis will show where each technology excels.
