

What electrical appliances are mainly used for outdoor power supply

The most obvious reason for an electrical power supply system is to provide electricity for homes, businesses, and industries powers appliances, lighting, heating, cooling, and a wide range of electronic devices essential for daily life and economic activities.

An important point is also to bear in mind the length of time for which the device will be used. For example an electric blanket may be used for 2 hours, but a hair drier for 5 minutes. Therefore the blanket uses $200W * 2 \text{ hours} = 0.4kWh$. The hair drier uses $2KW * 0.0833\text{hours} = 0.1666kWh$.
