What are battery storage systems?

Battery storage systems will play an increasingly pivotal role between green energy supplies and responding to electricity demands. Battery storage, or battery energy storage systems (BESS), are devices that enable energy from renewables, like solar and wind, to be stored and then released when the power is needed most.

How does a battery storage system work?

A battery storage system can be charged by electricity generated from renewable energy, like wind and solar power. Intelligent battery software uses algorithms to coordinate energy production and computerised control systems are used to decide when to store energy or to release it to the grid.

What is battery energy storage system (BESS)?
